

Problem: Menu bars do not show for windows other than the main Digikam window.

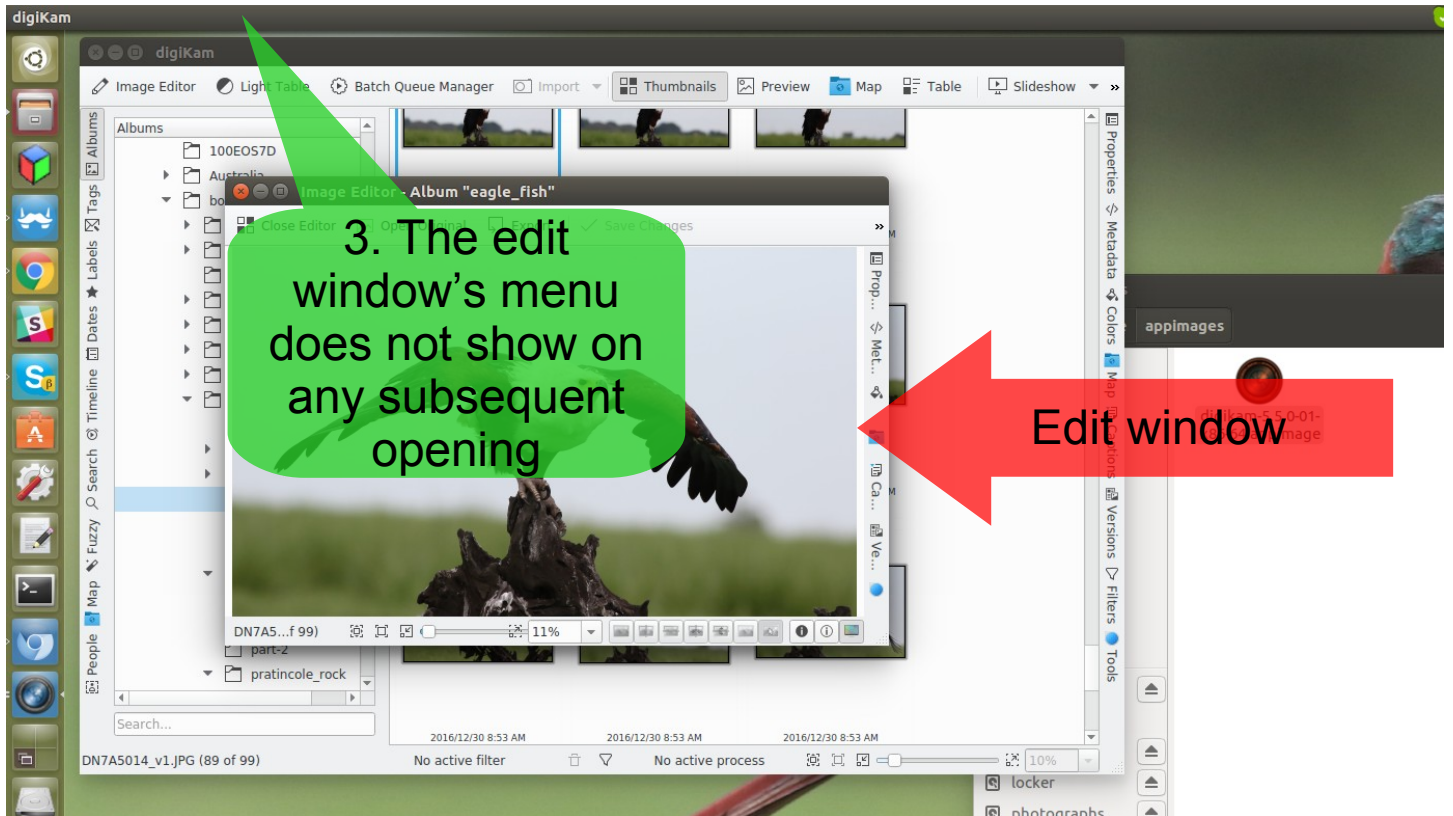

1. For the main window, the menubar shows correctly on the top bar as expected

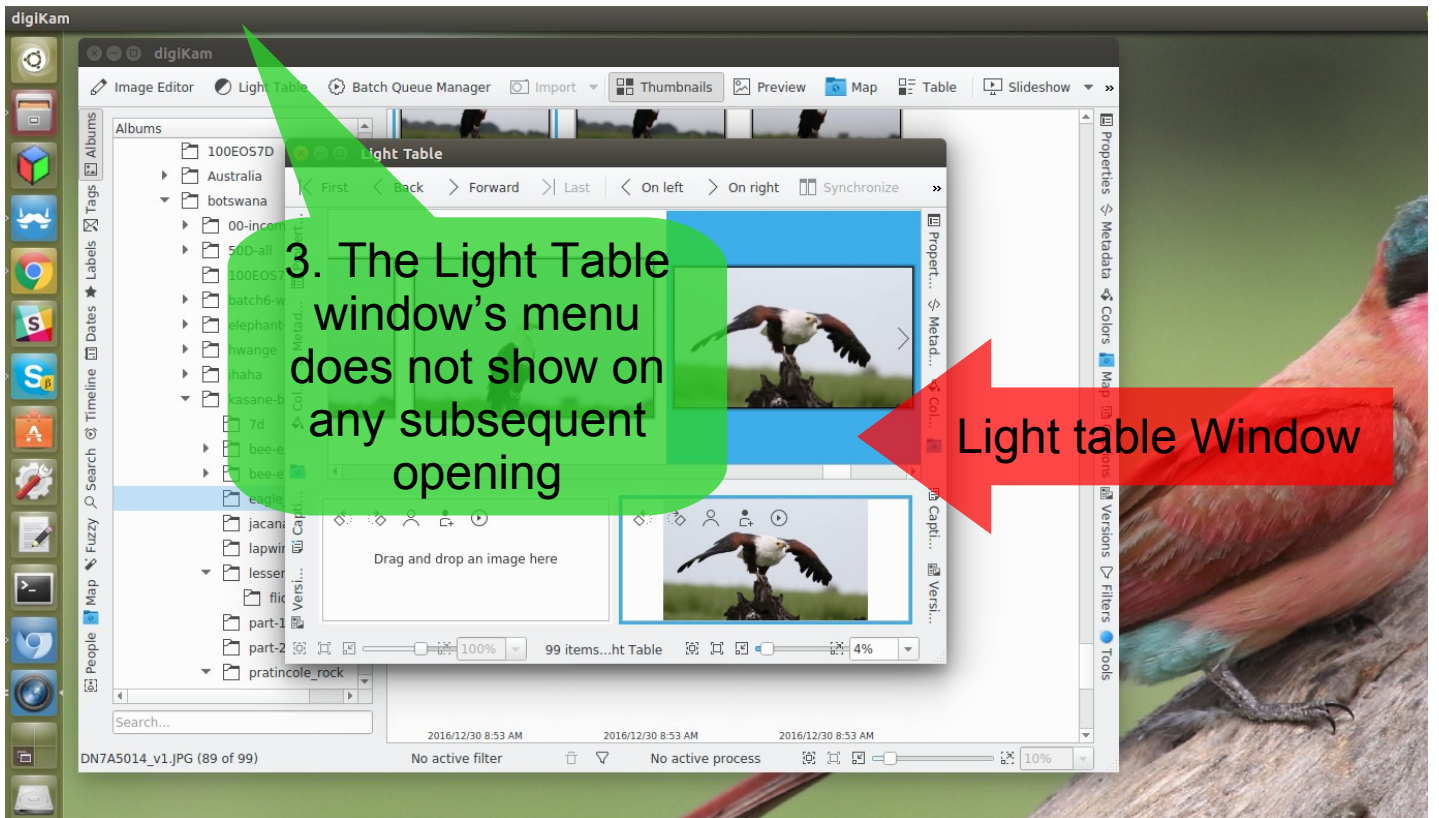

2. When a 'derivative' window opens for the first time, its menu appears correctly

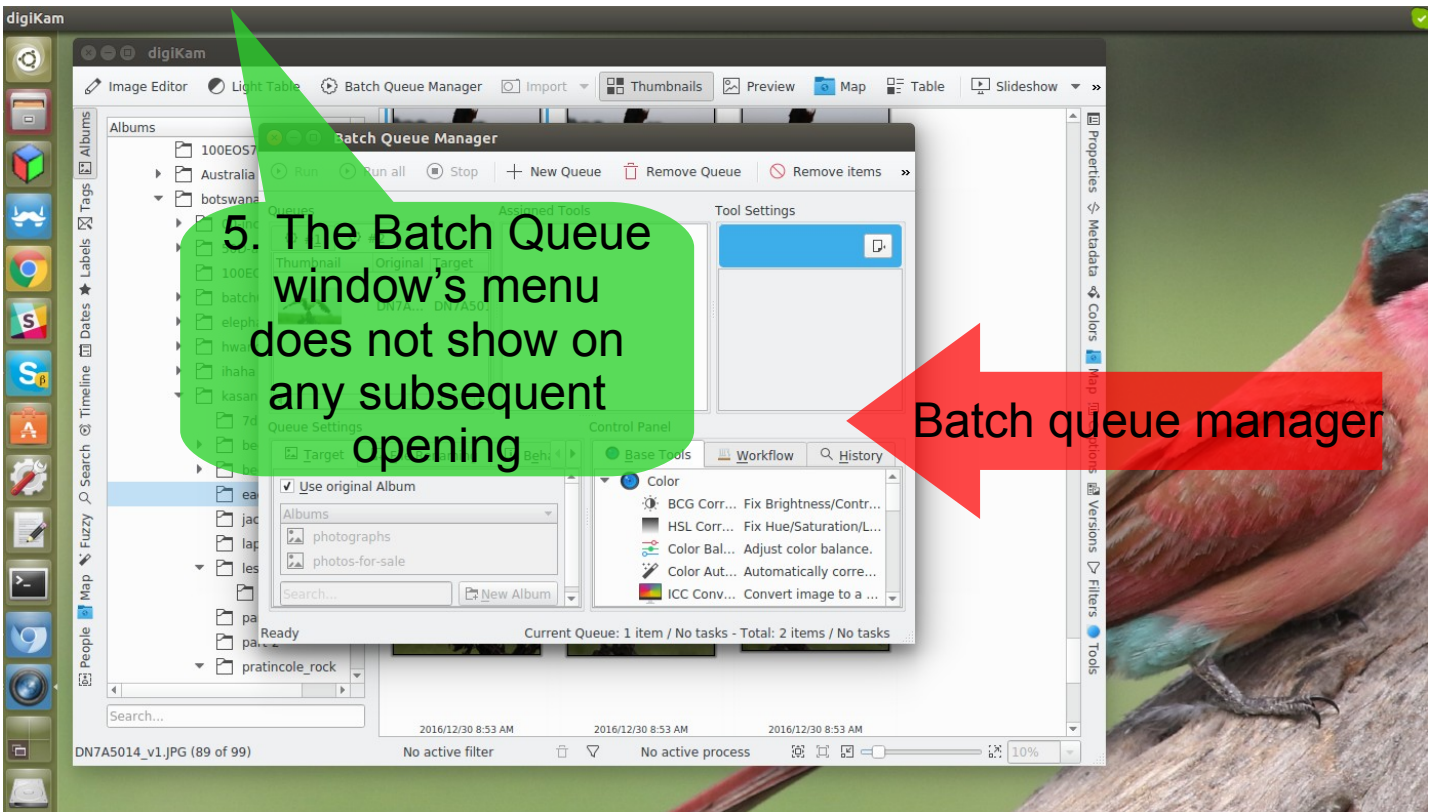

3. When a 'derivative' window opens for the the second time or any subsequent tiems, its menu does not appear at all

4. The light table menu also does not show when it is opened a second time or any subsequent times.

5. The Batch Queue manager menu also does not show when it is opened a second time or any subsequent times.

Neither CTRL_M nor editing any of the XML files produce any change.
